## Septic System Construction Under Way

Construction began Monday on the shared septic systems which will be designed to reduce pollution in Duxbury Bay.

The Robert B. Our Company of Harwich will

3

construct a sewer system with connected lines from 11 properties with Snug Harbor area to a shared leaching field at the Duxbury Yacht Club Golf Course off Harrison St.

The second leg of the system involves the Bluefish River area where sewer lines from 3 homes near the Blue Fish River Bridge will be linked to a shared leaching field further up St. George St. at the new Ellison Center for the Arts, now under construction at the site of the former Holy Family Church.

Town meeting, in separate votes, agreed to borrow \$650,000 toward the 2 projects.

Work is scheduled to be completed by June 30.

The new sewer system is the second sewer project involving Duxbury residents. Some 200 homes off the Gurnet Rd. area near the Marshfield line were hooked into a sewer system serving that area over a decade ago.
